

Thermal Inserts A Sustainable Alternative

More cost effective and flexible, our thermal inserts are a sustainable alternative for all perishable deliveries - both hot and cold!

Cost effective - Can be fitted into existing lockers, set aside two or three lockers in your parcel locker system to be thermal. No need for a standalone refrigerated tower unit.

Sustainable - Don't require electricity while refrigerated lockers need to be continually plugged into their own power supply.

Versatile - Can be used to keep items cold (grocery deliveries) and warm (UberEats etc) and can be retrofitted into our existing lockers at any time.

How Groundfloor™ works

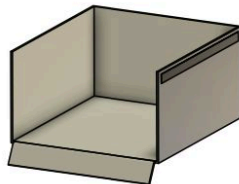

1. Couriers deliver into the lockers
2. A Digital Signature is created and recorded
3. QR code is automatically sent to the recipient via SMS
